Table of Contents

$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	insert sine function	$U_E(t) = \hat{U}_E \sin(\omega \cdot t)$	
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	insert root function with \limits	$\int_{x_0}^{x_1} \sin(a \cdot x) dx = [-\frac{1}{a} \cos(a \cdot x)]_{x_0}^{x_1}$	
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	put constant before \ integral		
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	insert limits	$t_0=0, t_1=t$	
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	$\cos(0)=1$		
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	multiply		
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	consider the \non-cosine terms		
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$	This part is independent in time. Since we assume purely sinusoidal quantities, the for the initial voltage of the capacitor must be:	$U_{C0} = U_{A0} = \hat{U}_E$	
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$			
$U_A = -\frac{1}{R \cdot C} \int \frac{dU_E(t)}{dt} dt + U_{A0}$
