complex impedance, exam ee1 WS2022

Exercise E1 Complex Impedance Circuit**(written test, approx. 15 % of a 60-minute written test, WS2022)**

1. Calculate the series impedance $\underline{Z}$ of the circuit shown in Fig. 1. The voltage source $u(t) = 3.0 \cdot \sin(2\pi \cdot 15 \cdot t) \text{ V}$ is connected to a series combination of an inductor of $330 \text{ } \mu\text{H}$ and a capacitor of $0.22 \text{ } \mu\text{F}$, all in series.

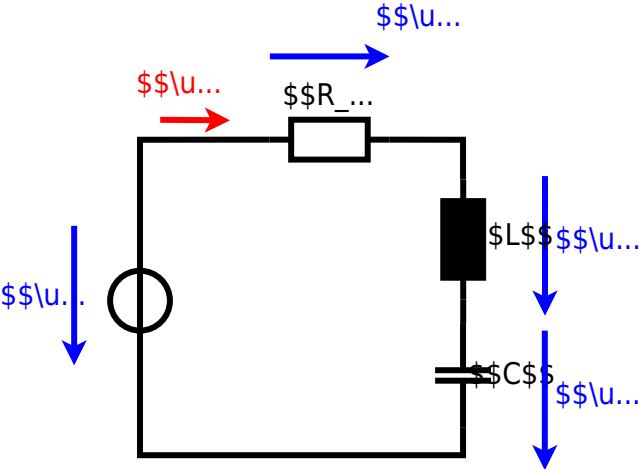

Solution
The linear source is connected with an inductor of $330 \text{ } \mu\text{H}$ and a capacitor of $0.22 \text{ } \mu\text{F}$, all in series.

Result
 $\underline{Z} = 19.8 - j48.2 \text{ } \Omega$

Draw the circuit diagram of the given circuit.

Solution
The circuit diagram of the given circuit is shown in Fig. 1. The voltage source $u(t) = 3.0 \cdot \sin(2\pi \cdot 15 \cdot t) \text{ V}$ is connected to a series combination of an inductor of $330 \text{ } \mu\text{H}$ and a capacitor of $0.22 \text{ } \mu\text{F}$, all in series.

Result
The impedance $\underline{Z}$ of the circuit is calculated as follows:
$$\underline{Z} = \underline{Z}_L + \underline{Z}_C = j\omega L - j\omega C = j2\pi \cdot 15 \cdot 330 \cdot 10^{-6} - j2\pi \cdot 15 \cdot 0.22 \cdot 10^{-6} \text{ } \Omega$$
$$\underline{Z} = j19.8 - j48.2 \text{ } \Omega = 19.8 - j48.2 \text{ } \Omega$$
