resistivity power exam_ee1_ss2023 Resistivity and temperature dependent Resistance (written test, approx. 7 % of a 60-minute written test, SS2023)
The resistance of the dielectric material of a film capacitor has to be calculated. The given film capacitor has an internal surface of $A=100 \text{ cm}^2$ and $d=0.8 \text{ μm}$. $\rho_{PP}(20 \text{ °C})=10^{17} \text{ Ωm}$. $\alpha=-0.048 \text{ 1/K}$, $\beta=+0.00057 \text{ 1/K}^2$.
 $R(20 \text{ °C}) = \rho/c \dots$

resistivity power exam_ee1_ws2022 Resistance of a Wire by Resistivity (written test, approx. 6 % of a 60-minute written test, WS2022) A heating element made of a Nichrome wire with a round cross-section is used in an electric oven. Nichrome is a common Nickel Chromium alloy for heating elements. $1.10 \cdot 10^{-6} \text{ Ωm}$. 3.57 mm .
 $R = \rho \cdot \frac{l}{A}$ & | \text{with } $A = r^2 \cdot \pi = \frac{1}{4} d^2 \cdot \pi$ \\ $R = \rho \cdot \frac{4}{d^2} \cdot l \dots$
